### **DETAILED ACTION**

1. This communication is in response to application's amendment dated 11/16/2007. The amendments of claims 3, 9, 10, 12-15, 20; the cancellation of claims 1-2, 11 and the addition of claims 21 have been entered.

### ***Response to Arguments***

2. Applicant's arguments with respect to claim 21 have been fully considered and are persuasive. The rejections of claims 3-10 and 12-21 have been withdrawn.

### ***Allowable Subject Matter***

3. Claims 3-10 and 12-21 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

**Regarding claim 21**, the prior arts of record fail to teach or disclose a communication system for down hole use as claimed in claim 21, which further comprises a torque generating apparatus that generates torque in response to the electrical output of the alternator and which is mechanically connected to the alternator for transmitting such torque to the alternator for regulating rotation thereof.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5) The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a) Elwood U.S. Patent 3,828,867 teaches a downhole mud turbine communication system, which comprises a drill collar having a first portion and a second portion separated from each other by an electrically insulating material; and a alternator having an output being electrically connected to each of the first and second portions (functions as a dipole antenna) of the drill collar. However, the communication system disclosed by Elwood does not teach a torque generating apparatus that generates torque in response to the electrical output of the alternator and which is mechanically connected to the alternator for transmitting such torque to the alternator for regulating rotation of said alternator.
